

Versa Lift

Platform Enclosure System

Model PE24 (for Versa Lift model 24)
Platform Enclosure Kit for the Lifting Platform

The Platform Enclosure Kit includes two fixed end walls and two hinged ramp-doors. The ramp-doors serve as loading ramps when lowered and as enclosure doors when raised and latched.

The Platform Enclosure provides containment walls for items on the lifting platform. Walls are especially useful for lifting a variety of loose objects like firewood, tools, groceries, canned goods, small packages, etc.

When lowered, the ramp-door becomes a loading ramp that makes it easy to roll wheeled storage bins, carts, dollies, and other items onto the lifting platform in the garage. When the ramp-door is raised and latched it completes the enclosure so items stay on the platform as the lift is operated to or from the attic.

1. Downstairs, lower the ramp/door to load the platform.

2. Raise and latch the ramp/door to run the lift up or down.

3. Upstairs, lower the ramp/door and unload the platform.

Great for Lifting Groceries

Great for Storing Tool Carts

Great for Storing Hobby Carts
